-

## Study description

---

- part of a larger project investigating cross-linguistic influence (CLI) in phonetics/phonology and syntax in Polish (L1), English (L2) and Norwegian (L3)
  - exploratory study meant to contribute to the field of multilingual studies (especially given the scarcity of online processing studies in L3)
  - tested constructions – different grammar domains:
    - lexical-syntactic: prepositions, reflexive verbs
    - morpho-syntactic: articles, gender agreement
  - methodology – self-paced reading task with post-stimulus grammaticality judgement questions
-

## Aim

---

- to test the influence of **cross-linguistic similarities and differences** (L1=L2=L3 vs. L1=L3≠L2 / L2=L3≠L1) on **sentence comprehension in L3** with L1 Polish – L2 English – L3 Norwegian multilinguals
-

  3. Constructions under investigation
  4. Research questions and hypotheses
  5. Methods
  6. Results
  7. Discussion
-

# Previous studies – prepositions and reflexives

---

## **Gibson et al. (2001)**

- open cloze task on the acquisition of prepositions in L3 German
- lack of facilitation based on structural similarity between L1 and L3

## **Alexieva (2012)**

- written production study on the acquisition of reflexive verbs in L2 Russian
  - difficulties in acquiring reflexive verbs for L1 English speakers, even at higher proficiencies
-

## Previous studies – articles

---

### **Ionin et al. (2021)**

- SPR and AJT study with Mandarin-English bilinguals
- effects of grammaticality in online processing

### **Choo (2022)**

- SPR and AJT study with Korean-English bilinguals
- effects of grammaticality in online processing

### **Jensen et al. (2023)**

- AJT study with Russian-English-Norwegian trilinguals and Norwegian-English and Russian-English bilinguals
  - facilitative effect of L2 English on L3 Norwegian for definiteness
-

# Previous studies – gender agreement

---

## **Alemán Bañón et al. (2018)**

- ERP study on gender agreement violations in L2 Spanish
- grammaticality effects modulated by proficiency
- similarity between L1 and L2 as only one of the factors impacting acquisition

## **Di Pisa et al. (2022)**

- SPR and AJT study on the effects of morphological markedness on gender agreement between heritage and homeland speakers of Italian
  - longer RTs for ungrammatical sentences in HS, especially for marked (feminine) adjectives
-

## Previous studies – methods

---

- self-paced reading task fairly common in L2 and L3 acquisition research (e.g., Sokolova & Slabakova, 2019; Długosz, 2023)
  - post-stimulus grammaticality judgment task sometimes criticized for “contaminating” the online part of the experiment (Keating & Jegerski, 2015)
  - however: numerous studies with the post-stimulus AJT (e.g., Dussias & Piñar, 2010; Jackson & Dussias, 2009; Jackson & van Hell, 2011)
  - alternatively: comprehension questions (e.g., Sokolova & Slabakova, 2019); separation of self-paced reading from the AJT task (e.g. Długosz, 2023)
-

1. General description

  7. Discussion
-

# Constructions

---

1. **lexical-syntactic** (present in three languages)
    - prepositional verbs and adjectives
    - reflexive verbs
  2. **morpho-syntactic** (present in two languages)
    - gender agreement (neuter noun + adjective)
    - definite and indefinite articles
-

# Prepositional verbs and adjectives

---

## 1. NO = EN = PL (same preposition in all three languages)

 Direktøren deres betalte **for** / \***om** blyanter og papir.

 Their director paid **for** / \***about** pencils and paper.

 Ich dyrektor zapłacił **za** / \***o** ołówki i papier.

## 2. NO = EN ≠ PL (same preposition in NO & EN, different in PL)

 Disse rommene er nok **for** / \***på** konferanser og møter.

 These rooms are enough **for** / \***on** conferences and meetings.

 Te pokoje są wystarczające \***dla** / \***na** konferencje i spotkania.

---

## Reflexive verbs

---

### 1. NO = PL = EN (reflexive in all three languages)

 Den unge gutten skadet seg / \*∅ kraftig i fingeren.

 The little boy hurt himself / \*∅ badly in the finger.

 Mały chłopiec mocno skaleczył się / \*∅ w palec.

### 2. NO = PL ≠ EN (reflexive in NO & PL, non-reflexive in EN)

 Søsteren hans føler seg / \*∅ ofte dårlig.

 His sister often feels herself / ∅ bad.

 Jego siostra często czuje się / \*∅ źle.

---

# Articles

---

## 1. NO = EN (indefinite articles)

🇳🇴 Denne filmen er **en** / \***Ø** tegnefilm om to prinsesser.

🇬🇧 This film is **a** / \***Ø** cartoon about two princesses.

## 2. NO ≠ EN (definite articles)

🇳🇴 Denne parken er **skogen** / \***skog** hun jogget i.

🇬🇧 This park is **the** / \***Ø** forest in which she was jogging.

---

# Gender agreement

---

## 1. NO = PL (neuter in NO & PL)

 Dette dyret er **sultent** / \***sulten** om vinteren.

 To zwierzę jest **głodne** / \***głodny** w zimie.

## 2. NO ≠ PL (neuter in NO masculine or feminine in PL)

 Dette kjøleskapet er **tomt** / \***tom** hele tiden.

 Ta lodówka jest cały czas \***puste** / **pusta**.

  4. Research questions and hypotheses
  5. Methods
  6. Results
  7. Discussion
-

## Research questions

---

- RQ1:** Are Polish-English-Norwegian multilinguals sensitive to **grammatical violations in L3 Norwegian** in online and offline processing?
- RQ2:** Is their performance influenced by **cross-linguistic similarities and differences** between L3 Norwegian and L1 Polish and/or L2 English?
-

# Hypotheses

---

- H1:** shorter RTs for grammatical than ungrammatical sentences
- H2:** shorter RTs in cross-linguistically similar than different conditions (both for grammatical and ungrammatical sentences):
- prepositional verbs and adjectives:  
NO = EN = PL < NO = EN ≠ PL
  - reflexive verbs: NO = EN = PL < NO = PL ≠ EN
  - articles: NO = EN < NO ≠ EN
  - gender agreement: NO = PL < NO ≠ PL
-

  3. Constructions under investigation
  4. Research questions and hypotheses
  5. **Methods**
  6. Results
  7. Discussion
-

## Study design

---

non-cumulative self-paced reading  
with binary-choice grammaticality  
judgement questions in E-Prime 3.0

---

# Participants

---

## 1. experimental group

- 34 Polish-English-Norwegian multilinguals (23 in Szczecin, 11 in Poznań)
- English proficiency – Cambridge General English placement test (M = 19.65/25; SD = 3.00)
- Norwegian proficiency – UiT placement test (M = 27.85/36; SD = 5.64)

## 2. control group

- 13 native Norwegian speakers
  - English proficiency – Cambridge General English placement test (M = 22.91/25; SD = 2.30)
-

## Stimuli

---

- key words: no cognates between Norwegian, English and Polish; frequency 3-6 on Zipf scale (NoWaC corpus)
  - key word position: 4<sup>th</sup> - 2<sup>nd</sup> word from the end of the sentence
  - length of sentences: 6-8 words
  - 192 token sentences: 12 sentences
    - x 2 similarity conditions (cross-linguistically similar vs. different)
    - x 2 grammaticality conditions (grammatical vs. ungrammatical)
    - x 4 grammatical constructions
-

## Procedure

---

- part of a battery of studies on phonetics, phonology, and syntax
  - **experimental group:** Polish universities in Szczecin and Poznań; April-May 2023
  - **control group:** UiT The Arctic University of Norway; June 2023 (feasibility constraints)
-

1. General description
  2. Previous studies
  3. Constructions under investigation
  4. Research questions and hypotheses
  5. Methods
  - 6. Results**
  7. Discussion
-

## Exclusion criteria from analysis

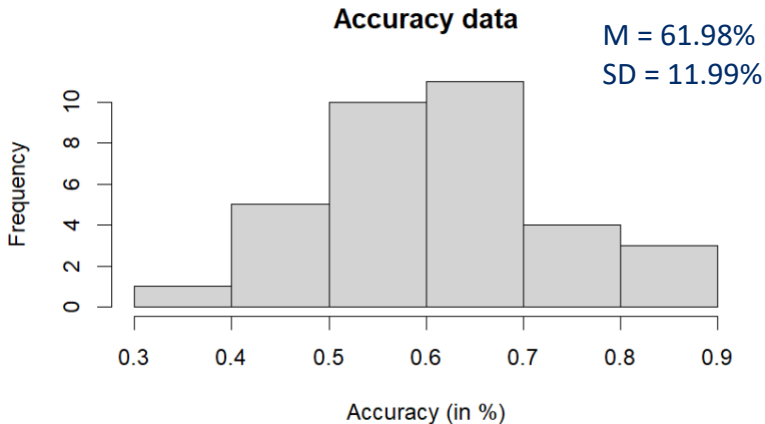

---

- items with native speakers' acceptance level < 60%-70% – 54/192 sentence pairs (28.13% of all data):
    - prepositional verbs and adjectives – 14/48 (29.17%)
    - reflexive verbs – 15/48 (31.25%)
    - articles – 19/48 (39.58%)
    - gender agreement – 6/48 (12.50%)
  - data points with incorrect responses to grammaticality judgement questions (38.02% of remaining data)
-

# Accuracy for grammaticality judgement questions

---

# Correlation between Norwegian proficiency and accuracy

# RTs per construction

## Data modelling

---

- linear mixed effects modelling in R:  $\log\_RT \sim \text{condition} * \text{grammaticality} + (1 | \text{subject}) + (1 | \text{sentence})$
  - **main effect of grammaticality:**
    - reflexive verbs ( $p < .001$ )
    - gender agreement ( $p < .001$ )
    - articles ( $p = .032$ )
  - post-hoc analyses to test differences between cross-linguistically similar vs. different conditions for grammatical and ungrammatical sentences –  
**no significant effects**
-

# RTs per construction for grammatical sentences

# RTs per construction for ungrammatical sentences

1. General description
  2. Previous studies
  3. Constructions under investigation
  4. Research questions and hypotheses
  5. Methods
  6. Results
  7. Discussion
-

## Discussion – hypotheses

---

**H1:** shorter RTs for grammatical than ungrammatical sentences ✓

confirmation of previous SPR data, esp. for articles (Ionin et al., 2019; Choo, 2020)

**H2:** shorter RTs in cross-linguistically similar than different conditions ✗

- linguistic similarity as only one of the factors influencing CLI (alongside complexity or salience) (Jensen et al., 2021)
  - L1 effects more pronounced in L3 online processing, whereas L2 effects related to the metalinguistic knowledge (Lago et al., 2019)
-

## Discussion – research questions

---

**RQ1:** Are Polish-English-Norwegian multilinguals sensitive to **grammatical violations in L3 Norwegian** in online and offline processing? – **YES**

- online processing – shorter RTs for grammatical than for ungrammatical sentences with accurate responses to AJ questions

**RQ2:** Is their performance influenced by **cross-linguistic similarities and differences** between L3 Norwegian and L1 Polish and/or L2 English? – **NO**

- no facilitation related to cross-linguistic similarities
-

## Methodological considerations

---

- design complexity (construction x grammaticality x cross-linguistic similarity), making the results difficult to interpret
- problematic experimental items → exclusions

## Planned SPR study

---

- study design: non-cumulative self-paced reading
  - participants: L1 Polish - L2 English - L3 Norwegian multilinguals
  - reduced complexity (construction x grammaticality)
  - modification of experimental stimuli
  - separate self-paced reading and GJT tasks (i.e., online and offline)
  - further suggestions?
-

## Acknowledgements

---

- This research is supported by Norway funds/NCN project grant GRIEG-1 (UMO-2019/34/H/HS2/00495)  
ADIM “Across-domain investigations in multilingualism: Modeling L3 acquisition in diverse settings”  
PI: Magdalena Wrembel
- special thanks to Piotr Garbacz, Witosław Awedyk, and Marit Westergaard for consultations and feedback

# Thank you!
